

# LISTING OF CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

Claims 1 -41 (Cancelled)

42. (Previously Presented) A method comprising:  
storing authentication information for a plurality of users;  
at an authentication service, receiving digital credential information associated with a first user from a relying party;  
verifying the digital credential information using the authentication information;  
providing verification information associated with the first user to the relying party; and  
providing information from the authentication service to the first user, the information indicative of receiving the digital credential information associated with the first user from the relying party.

43. (Previously Presented) The method of claim 42, wherein providing information to the first user comprises providing access to an activity log associated with the first user.

44. (Currently Amended) The method of claim 42, wherein:  
the authentication information comprises registration  
information indicative of a registration status with a  
registration authority[[,]]; and

the method further ~~comprising~~ comprises, prior to  
providing the verification information to the relying party,  
verifying the registration information with the registration  
authority.

45. (Currently Amended) The method of claim 42, wherein:  
the authentication information comprises registration  
information indicative of a registration status with a  
registration authority[[,]] ; and

the method further ~~comprising~~ comprises verifying the  
registration information with the registration authority.

46. (Previously Presented) The method of claim 42,  
further comprising:

storing access information associated with the relying  
party, the access information including information indicative  
of the providing the verification information associated with  
the first user; and

providing the access information to the relying party.

47. (Currently Amended) The method of claim 42, wherein:  
the authentication information comprises professional  
license status information[[,]] ; and

wherein providing verification information to the relying  
party comprises providing verification information indicative of  
the professional license status to the relying party.

48. (Previously Presented) The method of claim 42,  
wherein providing verification information to the relying party  
comprises providing information indicative of a failure to  
authenticate the digital credential information associated with  
the first user.

49. (Previously Presented) The method of claim 42,  
further comprising at least one of the relying party and the  
authentication service issuing a challenge in response to  
receiving digital credential information associated with the  
first user.

50. (Previously Presented) An article comprising a  
machine-readable medium embodying information indicative of  
instructions that when performed by one or more machines result  
in operations comprising:

storing authentication information for a plurality of  
users;

at an authentication service, receiving digital credential information associated with a first user from a relying party;

verifying the digital credential information using the authentication information;

providing verification information associated with the first user to the relying party; and

providing information from the authentication service to the first user, the information indicative of receiving the digital credential information associated with the first user from the relying party.

51. (Previously Presented) The article of claim 50, wherein providing information to the first user comprises providing access to an activity log associated with the first user.

52. (Currently Amended) The article of claim 50, wherein: the authentication information comprises registration information indicative of a registration status with a registration authority[[,]] ; and

the operations further comprising: comprise, prior to providing the verification information to the relying party, verifying the registration information with the registration authority.

53. (Currently Amended) The article of claim 50, wherein:  
the authentication information comprises registration  
information indicative of a registration status with a  
registration authority[[,]] ; and  
the operations further ~~comprising~~ comprise verifying the  
registration information with the registration authority.

54. (Currently Amended) The article of claim 50, wherein  
the operations further ~~comprising~~ comprise:

storing access information associated with the relying  
party, the access information including information indicative  
of the providing the verification information associated with  
the first user; and

providing the access information to the relying party.

55. (Currently Amended) The article of claim 50, wherein:  
the authentication information comprises professional  
license status information[[,]] ; and ~~wherein~~

providing verification information to the relying party  
comprises providing verification information indicative of the  
professional license status to the relying party.

56. (Previously Presented) The article of claim 50,  
wherein providing verification information to the relying party  
comprises providing information indicative of a failure to

authenticate the digital credential information associated with the first user.

57. (Currently Amended) The article of claim 50, wherein the operations further comprising comprise at least one of the relying party and the authentication service issuing a challenge in response to receiving digital credential information associated with the first user.

58. (Previously Presented) A system comprising:  
storage configured to store authentication information for a plurality of users; and  
an authentication server configured to:  
receive digital credential information associated with a first user from a relying party;  
verify the digital credential information using the authentication information;  
provide verification information associated with the first user to the relying party; and  
provide information to the first user, the information indicative of receiving the digital credential information associated with the first user from the relying party.

59. (Previously Presented) The system of claim 58, wherein the authentication server is configured to provide

information to the first user at least by providing access to an activity log associated with the first user.

60. (Previously Presented) The system of claim 58, wherein the authentication information comprises registration information indicative of a registration status with a registration authority, and wherein the authentication server is further configured to:

verify the registration information with the registration authority prior to providing the verification information to the relying party.

61. (Previously Presented) The system of claim 58, wherein the authentication information comprises registration information indicative of a registration status with a registration authority, and wherein the authentication server is further configured to verify the registration information with the registration authority.

62. (Previously Presented) The system of claim 58, wherein the authentication server is further configured to:

store access information associated with the relying party, the access information including information indicative of the providing the verification information associated with the first

user; and

provide the access information to the relying party.

63. (Previously Presented) The system of claim 58, wherein the authentication information comprises professional license status information, and wherein providing verification information to the relying party comprises providing verification information indicative of the professional license status to the relying party.

64. (Previously Presented) The system of claim 58, wherein the authentication server is configured to provide verification information to the relying party at least by providing information indicative of a failure to authenticate the digital credential information associated with the first user.

65. (Previously Presented) The system of claim 58, wherein the authentication server is further configured to issue a challenge in response to receiving digital credential information associated with the first user.
